Project Report: Heritage & Games

1. Executive Summary

Heritage & Games is a crossplatform interactive experience that aims to fuse cultural heritage with engaging gameplay. Leveraging a modern tech stack (React, Flutter, FastAPI, MongoDB, Firebase, NLP, and optional IoT), the team plans to build an 8week prototype that lets players explore digitised heritage sites, solve puzzles, and consume AIgenerated narratives.

The project demonstrates a clear ambition, a welldefined architecture, and a disciplined sprint schedule. However, the ambitious feature set, dataaccessing uncertainties, and the need for rapid AI model integration expose some risks.

Bottom line: The initiative is solid but would benefit from tighter scope control, clearer dataaccess pathways, and a more focused marketing angle. With those adjustments, Heritage & Games could evolve from a strong prototype to a compelling market offering.

2. Innovation Analysis

Overall Innovation Score: 70/100 The project is innovative but not a quantum leap. Its differentiation will largely hinge on the quality and originality of the AIgenerated content and the depth of the heritage immersion.

3. Strengths

4. Weaknesses

5. Suggested Improvements

6. Final Verdict

Recommendation: Proceed with a focused MVP (Minimum Viable Product).

- Deliverable: A single heritage site, interactive puzzle, AIgenerated narrative, available on web (React) and mobile (Flutter).

- Timeline: 45 weeks for core build + 1week for polishing and testing.

- Success Criteria: 200+ registered users within 4 weeks of launch, positive feedback on narrative quality, and at least one partnership with a museum or cultural organization.

Key Takeaway: Heritage & Games has a solid foundation and clear vision. By tightening scope, ensuring data legality, and iterating on AI components, the project can transform from a prototype into a commercially viable educational game that both entertains and preserves cultural heritage.
